PROJECT PROFILE

Project Title	Event Management System
Organization	-
Front-End	PHP
Back-End	My Sql
Software Use	Visual Studio 2015
External Project Guide	Mrs. Karishma Rupani
Internal Project Guide	Mrs. Karishma Rupani
Developed By	Nimavat Dhruvik & Nimavat Dhruv
Submitted To	Shree H.N. Shukla Group of Colleges
University	Saurashtra University

ACKNOWLEDGEMENT

- ❖ we would like to express my sincere gratitude to all those who have helped us in the successful completion of this project, “Event Management System.”
- ❖ First and foremost, we are deeply thankful to our project guide Mrs.Karishma Rupani for their constant support, valuable guidance, encouragement, and constructive suggestions throughout the development of this project. Their expertise and advice have been instrumental in shaping this work.
- ❖ we would also like to extend my thanks to H.N. Shukla group of colleges and the Department of I.T. for providing me with the necessary resources and facilities to carry out this project smoothly.
- ❖ Our heartfelt thanks go to our teachers and mentors who have directly or indirectly supported us with their knowledge and motivation during the course of this project.
- ❖ We are also grateful to our friends and classmates for their cooperation, encouragement, and useful feedback which helped us improve our work.
- ❖ Finally, we owe our deepest gratitude to our family for their continuous moral support, patience, and encouragement throughout the project development.
- ❖ Without the guidance, support, and blessings of all the above, this project would not have been possible.

Thank You To All

-Nimavat Dhruvik

-Nimavat Dhruv

ABSTRACT

- ❖ The Event Management System is a web-based application developed to simplify and automate the process of planning, organizing, and managing events. Traditional event management involves manual work such as maintaining records, handling registrations, managing vendors, and tracking expenses, which is often time-consuming and prone to errors. This system provides a digital platform where administrators, event organizers, and customers can interact efficiently.
- ❖ The system allows the admin to manage users, events, and vendors, while event managers can create, update, and monitor event details. Customers can view upcoming events, register online, and make bookings seamlessly. The database-driven approach ensures secure data storage, easy retrieval, and real-time updates.
- ❖ Developed using PHP, MySQL, HTML, CSS, and JavaScript, the system offers user-friendly interfaces and reduces paperwork by automating tasks such as event scheduling, ticket booking, and report generation. The project aims to improve accuracy, save time, and provide better coordination between stakeholders.
- ❖ This system not only streamlines event management activities but also enhances the overall user experience by providing a reliable, scalable, and efficient solution.

INTRODUCTION OF PROJECT

Project Goal : -

Automation – Reduce manual work in managing events.

Efficiency – Provide quick access to event-related information.

Accuracy – Maintain reliable data of participants, venues, and schedules.

User-friendliness – Offer easy interfaces for both organizers and participants.

Time & Cost Saving – Minimize resources spent on coordination and paperwork.

Specific Objectives : -

1. To provide a platform for creating, updating, and managing events easily.
2. To enable online registration and maintain participant records.
3. To automate scheduling, reminders, and notifications for events.
4. To manage resources such as venue, equipment, and staff efficiently.
5. To handle event budgets, payments, and expense tracking.
6. To generate reports on registrations, attendance, and feedback.
7. To improve communication between organizers and participants.
8. To collect feedback from attendees for improving future events.
9. To ensure data security, accuracy, and reliable event operations.
10. To save time and reduce manual effort in event planning and execution.

INTRODUCTION OF PROJECT

Scope of the Project : -

- ❖ The Event Management System is designed to provide a complete digital solution for planning, organizing, and monitoring events. It reduces manual effort by automating tasks such as event creation, registration, scheduling, and communication, making the process faster and more efficient.
- ❖ Organizers can create and manage events with details like name, venue, date, time, and resources. The system also supports budget tracking and resource allocation, ensuring that events are properly planned and conducted within the available resources.
- ❖ Participants can easily register online, view event details, and receive instant confirmations. This improves user convenience while maintaining accurate participant records. Automated reminders and notifications further enhance communication between organizers and attendees.
- ❖ The system also provides reporting and feedback features. Organizers can generate reports on registration, attendance, and expenses, while participants can submit feedback to help improve future events. This ensures transparency and continuous improvement.
- ❖ However, the system does not manage external vendor services such as catering or third-party logistics, and it cannot replace the physical execution of events. Its primary focus is on digital management, offering organizers and participants a streamlined, user-friendly, and reliable platform.

INTRODUCTION OF PROJECT

Brief Literature :-

- ❖ Event Management Systems have replaced manual planning with digital solutions to improve efficiency and accuracy. They automate registration, scheduling, notifications, and reporting, saving time and reducing errors. These systems enhance coordination between organizers and participants while providing feedback tools for future improvements.

Project Search :-

1. Existing System Limitations:

Traditional event management uses manual methods like paper registrations and spreadsheets, which are error-prone and time-consuming.

2. Web-Based Solutions:

Platforms like Eventbrite and Cvent exist, but they often lack customization for small-scale or local events.

3. Technological Trends:

Modern systems use cloud computing, mobile apps, and online payments to improve accessibility, real-time updates, and participant engagement.

4. Opportunities for Improvement:

A centralized web-based system can automate registration, improve communication, generate real-time reports, and reduce manual workload.

System Analysis And Design

Study of current System :-

1. Traditional Event Management:

Most events are still managed using manual methods such as paper registration, phone calls, and spreadsheets. These processes are time-consuming, prone to errors, and make it difficult to handle large numbers of participants efficiently.

2. Existing Software Solutions:

There are web-based platforms like Eventbrite and Cvent that help automate event planning. They allow organizers to manage registrations, schedules, and communication online, which reduces the manual workload.

3. Limitations of Current Systems:

Although these platforms help, they often lack flexibility and customization for small or specific events. Integration with other tools, real-time updates, and detailed reporting are sometimes limited in these systems.

4. Need for Improvement:

A modern, user-friendly event management system can solve these issues by automating registration, sending reminders, generating reports, and improving communication between organizers and participants. This makes events easier to plan and manage effectively.

System Analysis And Design

Problem And Weakness Of Current System:-

1. Manual Processes:

Traditional event management relies heavily on paper-based registration, phone calls, and spreadsheets. This increases the chances of human error, delays in data handling, and loss of information.

2. Time-Consuming:

Manual handling of tasks such as participant registration, scheduling, and feedback collection consumes a lot of time and effort for organizers.

3. Limited Communication:

Existing systems may not provide effective real-time communication between organizers and participants, causing delays in sending updates or important notifications.

4. Lack of Customization:

Many current web-based platforms offer limited customization options, making it difficult to adapt the system to the specific needs of different types or scales of events.

5. Inefficient Reporting:

Generating reports and tracking event performance can be slow or cumbersome, limiting organizers' ability to make data-driven decisions.

System Analysis And Design

Requirements of new system :-

1. User Requirements

- These are the expectations and needs of end users (customers and admins) from the system.

❖ General Users (Customers):

1. Users should be able to register and create an account easily.
2. Users should be able to log in and log out securely.
3. Users should be able to browse and search for events by category, date, or location.
4. Users should be able to register for events online without manual paperwork.
5. Users should be able to receive notifications or reminders for upcoming events.
6. Users should be able to view event details including schedule, location, and organizer information.
7. Users should be able to give feedback or rate events after attending.

System Analysis And Design

Requirements of new system :-

❖ Admin Users (Admins):

1. Admin should be able to log in securely and manage system access.
2. Admin should be able to create, edit, and delete events in the system.
3. Admin should be able to view all registered users and manage their access.
4. Admin should be able to approve or reject event registrations.
5. Admin should be able to generate reports for events, registrations, and user activity.
6. Admin should be able to send notifications or announcements to users.
7. Admin should be able to manage event categories, schedules, and locations efficiently.

System Analysis And Design

Requirements of new system :-

2. System Requirements

These are the hardware, software, and platform needs required to run the system effectively.

❖ Software Requirements (Platform-Level)

Type	Specification
Platform	Web-based application (PHP / HTML / CSS / JavaScript)
Framework	Core php
Server	XAMPP (Apache, MySQL, PHP, phpMyAdmin)
PHP	Version 7.4 or above
Database	MySQL (via XAMPP)
Browser	Chrome, Firefox, Safari, etc.
Email	SMTP configuration for sending notifications and exam alerts
OS	Windows 10 or later (for localhost testing)

System Analysis And Design

SDLC Waterfall Model : -

The waterfall Model follows a step by step linear sequence , meaning each phase must be completed before moving on to the next .

1.Planning

- ❖ Identify the main objective — to digitalize event management tasks like booking, scheduling, and registration.
- ❖ Analyze project feasibility in terms of cost, time, and available technology.
- ❖ Prepare a detailed project plan including timeline, team roles, and required resources.

2. Requirement Analysis

- ❖ Collect requirements from stakeholders (organizers, users, admins).
- ❖ Define what the system should do: online registration, event creation, user management, notifications, reporting, etc.
- ❖ Output: Software Requirement Specification (SRS) document.

3. System Design

- ❖ Based on requirements, create the overall system architecture.
- ❖ Design the database schema for events, users, and registrations.
- ❖ Prepare DFD, UML diagrams, and interface design for both general users and admin.
- ❖ Output: System design documents, ER diagrams, and UI mockups.

System Analysis And Design

SDLC Waterfall Model : -

4. Implementation (Coding)

- ❖ Developers write code according to the design.
- ❖ Example: Use PHP/Java/Python with MySQL database for backend, and HTML/CSS/JS for frontend.
- ❖ Modules: User Registration, Event Creation, Event Booking, Notifications, Reports.
- ❖ Output: Working source code of the Event Management System.

5. Testing

- ❖ Perform unit testing (check each module), integration testing (combine modules), and system testing (check whole system).
- ❖ Test scenarios: successful registration, failed login, event booking, report generation, etc.
- ❖ Output: Test reports and bug fixes.

6. Deployment

- ❖ Deploy the system on a local server (XAMPP) or web server.
- ❖ Provide access to users and admins with proper login credentials.
- ❖ Output: Live event management system available for use.

7. Maintenance

- ❖ Regularly update the system to fix bugs, improve performance, and add new features.
- ❖ Provide technical support to users and admins.
- ❖ Example: Adding payment gateway or mobile app integration in future.
- ❖ Output: Stable and updated system.

USE CASE DIAGRAM

DATA MODELLING

CLASS DIAGRAM :-

DATA MODELLING

DATA DICTIONARY :-

DATABASE NAME :- 'dbwedding'

DESCRIPTION :- Manage all the tables

TABLE NAME :- `calendar`

DESCRIPTION :- Stores event schedules and important wedding dates.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
☐	1 id	int(11)			No	None		AUTO_INCREMENT	Change Drop More
☐	2 title	varchar(255)	latin1_swedish_ci		No	None			Change Drop More
☐	3 startdate	varchar(48)	latin1_swedish_ci		No	None			Change Drop More
☐	4 enddate	varchar(48)	latin1_swedish_ci		No	None			Change Drop More
☐	5 allDay	varchar(5)	latin1_swedish_ci		No	None			Change Drop More

TABLE NAME :- `events`

DESCRIPTION :- Contains details about various wedding events or ceremonies.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
☐	1 id	int(11)			No	None		AUTO_INCREMENT	Change Drop More
☐	2 booking_id	int(11)			No	None			Change Drop More
☐	3 title	varchar(255)	utf8_general_ci		No	None			Change Drop More
☐	4 location	text	utf8_general_ci		No	None			Change Drop More
☐	5 date_created	datetime			No	current_timestamp()			Change Drop More

FUNCTIONAL AND BEHAVIOURAL MODELING :-

DATA FLOW DIAGRAM 1 LEVEL :-

DESIGN :-

HOME PAGE :-

DESCRIPTION :- DISPLAY THE WEDDING PLANNING LOGING INTERFACE WHERE USERS CAN SIGN IN OR REGISTER TO START PLANNING THEIR WEDDING.

The screenshot shows a web browser window displaying a wedding planning website. The browser's address bar shows 'localhost/Wedding-Management/'. The website has a navigation bar with links: HOME, PRICING, INSPIRATION, GALLERY, CONTACT US, and an ADMIN LOGIN button. The main content area features a large background image of a couple on a bridge at night. Overlaid on this is a form titled 'Wedding Planning Starts Here' with the subtitle 'START BY FILLING UP THE FORM'. The form contains the following fields: a first name field with 'karishma', a last name field with 'rupani', an email field with 'k@gmail.com', a phone number field with '9574796292', and a date field with '09/30/2025'. Below the fields is a red button labeled 'BOOK INQUIRY'. A small disclaimer text reads: 'By clicking "Book Inquiry" you agree to WPM's Privacy Policy'. The browser's taskbar at the bottom shows the time as 10:57 PM on 28-09-2025.

DESIGN :-

PRICING PAGE :-

DESCRIPTION :- SHOW VARIOUS WEDDING PACKAGES WITH DETAILS AND PRICE FOR USER TO COMPARE AND CHOOSE FOR.

DESIGN :-

PACKAGE DETAIL PAGE :-

DESCRIPTION :- PROVIDES DETAILED INFORMATION ABOUT A SELECTED WEDDING PACKAGE, INCLUDING SERVICE AND VISUALS.

DESIGN :-

INSPIRATION PAGE :-

DESCRIPTION :- THIS PAGE SHOWCASES A COLLECTION OF THE LATEST WEDDING INSPIRATIONS, INCLUDING THEME, DRESSES AND DECOR IDEAS TO HELP USERS PLAN THEIR PERFECT EVENT.

DESIGN :-

WEDDING DETAIL PAGE :-

DESCRIPTION :- THE PACKAGE HIGHLIGHTS DETAILED INFORMATION ABOUT A SELECTED WEDDING FEATURING PHOTOES, DESCRIPTION AND PERSONAL STORIES FOR INSPIRATION AND REFERENCE.

DESIGN :-

GALLERY PAGE :-

DESCRIPTION :- A VISUAL GALLERY DISPLAYING VARIETY OF WEDDING IMAGES – FROM VENUES TO PHOTOGRAPHY STYLES – ALLOWING USERS TO EXPLORE AND GATHER CREATIVE IDEAS.

DESIGN :-

CONTACT US PAGE :-

DESCRIPTION :- THIS PAGE PROVIDES USER FREE CONTACT DETAILS, INCLUDING LOCATION AND COMMUNICATION OPTIONS, ALLOWING THEM TO GET IN TOUCH FOR INQUIRIES OR SUPPORT.

DESIGN :-

ADMIN PANEL - DASHBOARD :-

DESCRIPTION :- THE ADMIN DASHBOARD DISPLAY KEY CONTROLS AND OPTIONS FOR MANAGING WEBSITE CONTENT, USERS AND UPDATE EFFICIENTLY.

DESIGN :-

PROFILE DETAIL PAGE :-

DESCRIPTION :- THIS PAGE PRESENT A USERS PERSONAL INFORMATION, PROFILE PICTURE, AND ACCOUNT DETAILS ENABLING EASY ACCESS TO MANAGE OR UPDATE PERSONAL DATA.

DESIGN :-

BLOGS & EVENT PAGE :-

DESCRIPTION :- USE TO RECORD AND MANAGE BOOKING DETAIL FOR EVENTS, ENSURING ACCURATE TRACKING OF CLIENT RESERVATION AND SCHEDULES.

DESIGN :-

NEW ARTICLE PAGE :-

DESCRIPTION :- ALLOWES ADMIN TO CREATE AND PUBLISH NEW ARTICLES RELETED TO WEDDING, TRENDS, OR INSPIRATION ON THE WEBSITE.

The screenshot displays the 'New Article' page within the WPMS Admin Panel. The interface includes a sidebar with navigation links: Dashboard, Blogs & Events, Clients, Services, Gallery, Upload Photos, and User Management. The main content area is titled 'New Article' and features a 'Save article' button and a 'Cancel' button. The form fields include: 'Wedding Type' (dropdown menu), 'Related Wedding Post' (dropdown menu), 'Title' (text input), 'Description' (text area), 'Choose File' (file upload button), and 'Wedding Date' (date picker). The page is viewed in a web browser at the URL 'localhost/Wedding-Management/admin/blog_events_add.php'.

DESIGN :-

EDIT ARTICLE PAGE :-

DESCRIPTION :- ENABLES MODIFICATIONS OF EXISTING ARTICLES, INCLUDING UPDATING IMAGES, TEXT, OR PUBLICATION DETAILS.

DESIGN :-

CLIENTS PAGE:-

DESCRIPTION :- SHOW A LIST OF ALL REGISTERED CLIENTS WITH OPTIONS TO VIEW, EDIT, OR MANAGE THEIR DETAILS FOR SMOOTH COORDINATION.

DESIGN :-

CLIENTS INFORMATION PAGE:-

DESCRIPTION :- DISPLAY DETAILED INFORMATION ABOUT EACH CLIENT, INCLUDING CONTACT DETAILS AND EVENT PREFERENCES, HELPING MANAGE CLIENT RECORD EFFICIENTLY.

The screenshot displays the 'Edit Client Information - Admin' page in a web browser. The URL is `localhost/Wedding-Management/admin/client_assign.php?booking=33&user_id=33`. The page features a sidebar with the 'WPMS Admin Panel' header and a user profile for 'Dhruvik Nimavat, Administrator'. The sidebar menu includes: Dashboard, Blogs & Events, Clients, Services, Gallery, Upload Photos, and User Management. The main content area is titled 'Client Information' and contains a form with the following fields: Firstname (Arny), Lastname (Stewart), Email (arny@gmail.co), Wedding Date (05/18/2022), Wedding Type (Classic - 1,091,000), Bride's name (Test), Groom's name (Test), Phone (AAAAAAAAA), City (Houston), Assigned Organizer (Big Day Planners), Wedding Location, Expected Visitor, and Cash Advanced. A '+ Back' button is located in the top right corner of the form area. The browser's taskbar at the bottom shows the time as 10:06 PM on 09-13-2023.

DESIGN :-

SERVICES PAGE :-

DESCRIPTION :- LIST ALL AVAILABLE EVENT MANAGEMENT SERVICES WITH OPTION TO ADD, EDIT, OR DELETE SERVICES OFFERED BY THE COMPANY.

DESIGN :-

GALLERY PAGE :-

DESCRIPTION :- DISPLAY COLLECTION OF WEDDING PHOTOS AND EVENT HIGHLIGHTS FOR VISITORS TO EXPLORE AND GAIN IDEA.

DESIGN :-

UPLOAD NEW IMAGE PAGE :-

DESCRIPTION :- PROVIDE FUNCTIONALITY TO UPLOAD MEDIA FILES SUCH AS IMAGE FOR USE ACROSS THE WEBSITE.

DESIGN :-

USER MANAGEMENT PAGE :-

DESCRIPTION :- THE USER MANAGEMENT PAGE ALLOWS THE ADMIN TO ADD,VIEW,EDIT,AND DELETE USER DETAILS, ENSURING EFFICIENT CONTROL AND MAINTENANCE OF USER RECORDS.

SUMMARY : -

- ❖ The Event Management System is a software application designed to simplify the process of planning, organizing, and managing different types of events such as seminars, conferences, weddings, cultural programs, or corporate meetings. It provides a digital platform where administrators, organizers, and users can interact efficiently.
- ❖ The system allows event organizers to create, schedule, and manage events while participants can register, book tickets, and get updates easily. It includes features like event scheduling, venue management, online registration, payment integration, and real-time notifications.
- ❖ By automating manual processes, the system reduces paperwork, saves time, and minimizes human errors. It ensures better coordination among all stakeholders and provides detailed reports and analytics to improve future event planning.
- ❖ Overall, the Event Management System enhances user experience, increases efficiency, and delivers a cost-effective solution for smooth event execution.

UNIQUE FEATURE OF PROJECT : -

1. **Online Event Registration & Booking** – Participants can register or book seats/tickets online without manual paperwork.
2. **Real-time Notifications & Updates** – Automatic alerts via email/SMS/app for event reminders, schedule changes, or announcements.
3. **Venue & Resource Management** – Tracks venue availability, seating arrangements, and resource allocation (e.g., audio-visual equipment).
4. **Payment Gateway Integration** – Secure online payments for ticket booking, registrations, and other event-related services.
5. **User Role Management** – Different access levels for Admin, Event Organizer, and Participant with specific rights.
6. **Feedback & Rating System** – Collects participant feedback to analyze event success and improve future planning.
7. **Reports & Analytics** – Generates detailed reports on registration, attendance, expenses, and revenue.
8. **Customizable Event Packages** – Organizers can create different event categories (corporate, cultural, personal) with tailored features.
9. **Automated Task Scheduling** – Helps organizers assign and track tasks, deadlines, and responsibilities.
10. **Multi-Platform Access** – Available on web and mobile for flexibility and convenience.

FUTURE ENHANCEMENT : -

1. **AI-based Event Recommendations** – Suggest events based on user interests.
2. **Chatbot Support** – Real-time assistance for queries and guidance.
3. **Virtual & Hybrid Event Support** – Live streaming and online participation.
4. **Blockchain Ticketing** – Secure, fraud-free ticket management.
5. **Smart Scheduling** – Automated venue and time conflict detection.
6. **Advanced Analytics & Reports** – Insights on attendance and revenue.
7. **IoT-based Check-ins** – QR code, RFID, or NFC for seamless entry.
8. **Social Media Integration** – Event promotions and live sharing.
9. **Mobile App with Notifications** – Reminders and instant updates.
10. **Multi-language & Accessibility Support** – Usability for global and diverse users.
